

IM Certified® vs. Curricula Marketed as “Based on IM® Math”

Not all materials marketed as “based on IM® Math” have the same quality, coherence, or level of alignment. IM Certified curricula are reviewed and approved by Illustrative Mathematics to ensure alignment with IM’s design and instructional approach.

Essential Features

Why They Matter

Curricula “Based on IM® Math”

Authored & Maintained by IM	Materials maintained by the same team that built the curriculum, with updates driven by learning goals, not product cycles.		
Intentional Lesson Synthesis	Brings the lesson’s mathematical ideas together so students leave each lesson with the intended takeaway intact.		
Teacher Guidance	Includes the guidance and flexibility teachers need to respond to student thinking while keeping the lesson’s mathematical goals intact.		
Reviewed by IM for Alignment	Certification gives districts independent assurance that what they adopt preserves the coherence and instructional model shown effective in IM research.		
Latest Approved IM Curriculum	Reflects the most current, fully tested version, including revisions informed by classroom feedback and ongoing research.		

Which IM Certified® partner is right for your district?

IM Certified® curriculum distribution partners deliver the same IM® Math curriculum, authored by Illustrative Mathematics®, the nonprofit behind IM Math. Each partner offers different platforms, print options, and implementation supports — so districts can choose the path that best meets their needs.
